<u>Proposal</u>

My name is Hayden Guthrie and i'm in period 4. I am going to make a website that generates a random motivational quote and tells you the date. My project will allow you to wake up in the morning and not only see the date and time but give you a quote to motivate you through your day. I will be using HTML5, CSS, Javascript. I expect to meet challenges with generation random quotes. I either plan on finding a way to use quotes from another source or imputing them myself. I want my website to be very simple and clean (warm colors, nothing except time and quote).

Milestone 1 - Create Website, setup Github
Milestone 2 - Basic Layout
Milestone 3 - Setting up the date and time
Milestone 4 - Current Weather for the area
Milestone 5 - Find a way to create random motivational quotes, Implement motivational quotes and Button that gives you a new quote
Milestone 6 - Organize the website (make sure everything is in the place i want it like centering everything i center of page
Milestone 7 - Create about page
Milestone 8 - Make it a one page website
Milestone 9 - Make the about page below the main website page
Milestone 10 - Create arrow at bottom of page that auto scrolls the the about page.
Milestone 11 - Start stylizing the website (background, colors, etc.)
Milestone 12 - Audio that plays when you open the website ('the time is")
Milestone 13 - Change cursor to clock
Milestone 14 - Sounds when clicking buttons
Milestone 15 - Background clock noise
Milestone 16 - Create Login
Milestone 17 - Make it so when people create an account and login it will say hi and their name
Milestone 18 - Make it so after hi it says if it's Morning, Afternoon, Evening, Night
Milestone 19 - People who are logged in can set sleeping goals
Milestone 20 - Tracks if you are keeping your goals
